

KESHAV SHARMA

Full-Stack AI Developer | Python | React | GenAI | RAG | Agentic AI
Mohali, Punjab, India | sharmakeshav364@gmail.com | +91 8847371175 | [LinkedIn](#) | [GitHub](#)

Professional Summary

Full-Stack AI Developer focused on building end-to-end applications that combine AI capabilities with reliable backend services, databases, APIs, and modern web interfaces. Experienced in taking AI-driven products from workflow design and data integration through backend APIs, React interfaces, evaluation, security, and production-oriented deployment, with emphasis on building reliable and measurable business applications.

Technical Skills

Programming & Data: Python, JavaScript, TypeScript, SQL, NumPy, Pandas

Frontend: React, HTML, CSS, REST API Integration

Backend: FastAPI, REST APIs, Pydantic, SQLAlchemy, Async Programming, Node.js, Express

Databases: PostgreSQL, Redis, SQLite, pgvector, FAISS

Generative AI: LLMs, Prompt Engineering, Context Engineering, Structured Outputs, Tool Calling, OpenAI API, Anthropic Claude API

RAG & Agentic AI: RAG, Vector Search, Hybrid Search, Reranking, LangGraph, LangChain, Multi-Agent Systems, MCP

ML/DL/NLP: Scikit-learn, Feature Engineering, Model Evaluation, PyTorch, NLP, Transformers

AI Engineering: LLM Evaluation, RAG Evaluation, Observability, Tracing, Prompt Injection Defense, LLM Guardrails

Deployment & Tools: Docker, Docker Compose, AWS, Git, CI/CD

Experience

AI Engineer | Webvory

Mar 2026 – Present

Mohali, India

- Designed LangGraph-based multi-agent workflows for campaign generation and operational reporting, coordinating AI reasoning, business tools, structured workflows, and automated execution.
- Built an LLM evaluation framework using GPT-4o to assess generated outputs, validate workflow behavior, and support quality monitoring across AI applications.
- Developed an inventory intelligence system reconciling **41,000+ products across 57 vendors**, connecting structured product data with AI-driven operational workflows.
- Built a RAG-powered multi-channel support system using **Claude and FAISS**, connecting WhatsApp, Gmail, and Freshdesk with a **185-scenario knowledge base**.

Software Developer | Presage Insights

Aug 2025 – Mar 2026

Noida, India

- Developed and maintained Node.js/Express REST APIs supporting operational dashboards and business workflows.
- Implemented API validation, authentication flows, backend integrations, and Angular frontend connectivity for production features.

Operations Analytics Specialist | ATL Heavy Haul Inc.

Nov 2023 – Mar 2025

Remote

- Developed dashboards and automation tools that improved operational workflows by **15%**; supported AWS-based infrastructure and internal operational systems.

Projects

NovaRetail — Enterprise AI Intelligence Platform

Python, FastAPI, PostgreSQL, pgvector, LangGraph, RAG, React, Docker

- Built an end-to-end AI investigation platform combining PostgreSQL business data with an 8-document knowledge corpus; implemented PDF ingestion, page-aware chunking, embeddings, pgvector retrieval, citation-grounded RAG, LangGraph investigation, controlled tool calling, and React-based interfaces.

AI Business Operations Agent

Python, FastAPI, LangGraph, RAG, FAISS, SQLite, Shopify, Freshdesk, ShipStation

- Built a production-oriented AI agent converting natural-language requests into deterministic execution plans for sales, inventory, customer analytics, policy Q&A, and read-only external data retrieval.
- Engineered centralized ToolGateway authorization with JWT/RBAC, capability-based access control, account/store isolation, secure credentials, strict GET-only integrations, retries, timeouts, rate limits, and partial-failure handling.
- Reduced unnecessary AI execution through zero-LLM analytics, bounded RAG/LLM synthesis, context controls, RAG caching, and parallel execution; added tracing, P50/P95/P99 metrics, audit logging, token/cost tracking, and validated with **156 tests, 24/24 production-path evaluations, and 20/20 RAG evaluations**.

AI Agent Harness / Runtime

Python, FastAPI, LLMs, MCP, Sandboxing, Tool Orchestration

- Built a controlled runtime separating model reasoning from tools, environment access, state, permissions, and execution management; implemented a **Task → Plan → Execute → Observe → Verify** loop with persistent sessions, retries, failure recovery, and bounded execution.
- Integrated MCP with native tools/APIs and added execution tracing, replayable sessions, verification gates, and sandboxed operations for reliable and debuggable agent execution.

Education

M.Tech, Computer Science (Part-Time) — Punjabi University

2023 – 2026

B.Tech, Computer Science & Engineering — Maharaja Ranjit Singh University

2018 – 2022
